CHILLER PLATES

Used in conjunction with gylcol unit, it is a highly engineered cold plate with no moving parts that uses gylcol from a long draw draft system to flash chill the beer before point of dispense. It helps correct issues with improperly-sized walk-in coolers.

CO₂ & O₂ MONITOR/ALERT SAFETY SYSTEMS

- Most cost effective CO₂ safety system currently available
- Four alarm levels fulfill all U.S. CO₂ safety codes and norms
- Central unit makes odorless invisible CO₂ gas visible and advises what to do in different alarm situations
- Automatic calibration is safer and requires zero maintenance
- System is expandable, up to eight sensors
- System can be connected to an existing fire alarm system that is connected to the fire department

- The portable LogiCO2-Scout sensor, 2216, is placed in a foam ball, rolled into a CO₂ storage or usage area, then sends readings to a smartphone outside the danger zone ensuring safety before entering. Range: 65-100 feet
- An O₂ monitor should be installed near nitrogen tanks, gas blenders and inside coolers where nitrogen is used

INSULATED BARRIER TUBING BUNDLE

973 Series Bev-Seal Ultra® **Insulated Barrier Tubing Bundle** is comprised of flushable Bev-Seal Ultra® Series 235 syrup barrier tubes, each color coded, individually numbered, and red and blue Series 221 LLDPE coolant tubes strategically placed and designed to provide optimum cooling. A tear-resistant aluminized film wrap over the group of tubes further enhances the insulating properties of the 3/4" thick tubular foam sleeve. A black extruded jacket with slip agent to minimize friction is branded with product identification, NSF listing marks, and footage counter marks. Other jacket colors avaiable (some limitations may apply).
